make a great combination.*

Ash and Soot Removal

KoalKeeper™
Live Ember Recovery Tool

Koal Keeper
Live ember recovery tool
This is a real time saver and simplifies fire maintenance. **NEW!** Sift out the embers in your woodstove or fireplace while getting rid of unwanted ash. Just scoop up a shovel full, shake the ashes through the grate, and preserve the live embers for starting your next fire. Keep the fire going continuously without fire-starters. Black powder coated steel with hanging hole in handle. 18"L, USA made. **#562-5533**; \$12.95

STOVES
ACCESSORIES

Steel Ash Shovel

Our strongest and biggest

**BEST
SELLER**

22 gauge steel with gloss black enamel finish. 21"L, blade is 5"Wx9½"D, 1 lb. USA made.

#JCS; \$8.95

Soot Scraper

An improved version of the old standby! Great for getting ashes from hard to reach corners, cleaning smoke passages, etc. 30" long, blade is 1½" by 3", made in Canada.

#H-1425; \$4.95

Coal Hods

Heavily reinforced version with continuous steel rod at top edge. Bail handle securely wraps around this rod and cannot tear out as on other designs. Dust-tight folded seams and handle lip on bottom edge for easy pouring. Holds 12 quarts, 11"H, 3 lb. Made in Canada and Mexico.

#17G Galvanized; \$14.95

#17B Antique Black; \$14.95

Steel Ash Pail

Use for ashes or storage

An old-fashioned covered pail that is just the right size for ash removal from stove or fireplace. Works great for storing pet food or bird seed, too. Even works as an extra large compost pail. Handle locks lid in place. Black painted steel, sturdy steel bail, holds 6 gallons. 15"H, 12"OD, 5 lb. USA made.

#206-347; \$24.95

Note: This is a difficult item to pack. Small dents may occur during shipping.

Steel Ash Carrier

Safely dispose of ashes

Ashes often contain glowing cinders weeks after your last fire. Scoop ashes into carrier and close hinged cover to secure dirty or hot fly ash. Steel legs keep carrier above floor to prevent fire or heat damage. Sloped front lets you get bin right up to stove. Wooden handle on top for carrying, steel handle on back for dumping. 19"Lx9½"Wx12"H (including handle), 8½ lb, USA made.

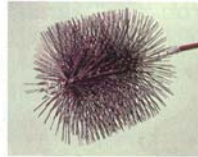

#100-0686; \$59.95

Chimney Brushes in Every Size

Thorough cleaning prevents chimney fires

If you burn wood in a stove or fireplace, you know how important good chimney maintenance is. Our chimney brushes help you

Round brush

Square brush

keep your chimney clean and clear of creosote, thus drastically reducing the chance of chimney fires in your home. Wire bristles fit snugly in chimney or flue liner for efficient cleaning. Fiberglass rod with ¾" pipe thread screws together. Sold in 4' lengths (buy as many as you need).

#404-446 Round 6"OD; \$9.95

#402-69 Square 11"; \$26.95

#404-454 Round 8"OD; \$11.95

#406-992 Square 12"; \$29.95

#402-67 Square 6"; \$21.95

#407-045 Rectangle 7"x11"; \$29.95

#424-102 Square 7"; \$22.95

#425-034 Rectangle 8"x12"; \$34.95

#426-364 Square 8"; \$23.95

#425-392 Brush Rod 4'L; \$7.95 ea

Note: Round brushes have poly bristles instead of wire. Most round chimneys are stainless steel. Wire brushes tend to scratch the steel, creating a rough surface that allows creosote to build up faster.

Helpful Hint: Stove Chimneys

All wood and most gas stoves require a good chimney to work properly. In fact, choosing the proper chimney is just as important as choosing the proper stove. Remember that each appliance requires its own chimney.

The chimney should be taller than everything that is around it. Tall trees, structures, even hills that are nearby can all cause problems. The minimum height from the smoke outlet of your stove to the top of the chimney should be 12-15 feet. Chimneys are often too short in ranch-style homes. The diameter of the chimney and the connecting pipes should be about the same as the diameter of the smoke outlet on the stove. Chimneys that are too big or too small can cause smoking, creosote build-up (a fire hazard) or may make the stove hard to start. Chimneys are often too large when a stove is connected to a fireplace.

A good chimney is hot on the inside but never gets more than barely warm on the outside. If the chimney gets hot on the outside, it becomes a fire hazard. On the other hand, if it doesn't stay hot on the inside, it will push smoke and odor back into the house. Never use anything other than a brick chimney with a liner or a UL-approved metal chimney. Known as a "Class A" chimney, these types of chimneys work better and are much safer than chimneys made from cinder block, stovepipe or well casing.

Marginal chimneys work most of the time and may only become troublesome when several aggravating conditions occur at once. For example, improperly sized chimneys may work fine except when exposed to high wind or a low-pressure systems, such as rain or fog.

Most performance problems are minor and can easily be corrected. If you think you have a chimney problem, please discuss it with our staff so we can help you diagnose the problem and come up with the best solution.

Electric Ash Vacuum

Remove ashes quickly, safely and cleanly

You love your stove, but you hate the dirty ashes and dust. Remove them with this efficient ash vacuum. No more dust, cumbersome bucket and shovel, or dangerous hot coals. Flame retarding hose reaches 5 ft and can handle pieces up to ½" in diameter. Two filters prevent dust from getting into room and filters can be cleaned *without* taking off lid. Fireproof steel chamber holds 3 gallons of ashes. 1-year warranty, 115V, 6 amp motor. 20"Hx12"OD, 19 lb. USA made.

#12-250; \$199.95
